

**Trouble in spotting the difference between
a brachiopod and a bivalve or
a granite and a diorite or
quartz and calcite ?**

Have you specimens that you would like to identify?

Then this is for YOU

WORKSHOP & ROADSHOW – Identifying Specimens

**Saturday 17TH February 2024 10am to 3pm
Kenilworth – Senior Citizens Club, Abbey End Car Park**

**Epecially aimed at beginners and those (?most of us) who
find identification difficult**

This year we are focusing on identifying rocks, fossils and minerals. For many members - probably most – this is one of the most challenging aspects of the subject.

We shall assume that all participants have next to no background in this area.

We shall be using specimens from the Group's collection as the basis for the proceedings, but are hoping that individuals will bring in their own specimens for ID – possibly adorning the garden 'because it looks nice'!!

If you wish, you may register for yourself and suggest up to two people (over the age of 13) to join you. You must be the responsible adult if children are involved. However, be aware that priority will be given to members in the final allocation of spaces.

Parking is available (charged) in the adjacent car park and some free on-street parking might be available to early riders in Forrest Rd., Kenilworth

Please complete the boxes below and return to JulieHarrald@googlemail.com by **Friday 2nd February.**

I wish to attend the Saturday School on 17 February and have transferred my registration fee of £10 to WGCG at Sort Code **40-27-06** A/C No. **51411101** with reference (Surname) (Workshop)

OR send this form with a cheque payable to WGCG to: Julie Harrald (Workshop), 70 Blackbrook Road, Loughborough, Leics., LE11 4PZ

The following people would be interested in joining me (names) (no more than 2)

.....
I will probably bring some specimens, give a rough idea of number
